2027 Formulary (List of Covered Drugs)

EFFECTIVE JANUARY 1, 2027

THIS LIST IS SUBJECT TO CHANGE.

InScript™

Introduction

The InScript Formulary contains covered drugs for a broad range of diseases and is organized into drug classes (e.g., penicillin). Please note that generic drugs are shown in lower-case letters, whereas brand prescription drugs are shown in capital letters.

This list is created by a Pharmacy and Therapeutics Committee. This group of doctors and pharmacists review which medications will be covered, how well the drugs work, and overall value. They also make sure there are safe and covered options.

Pharmacy Benefits

To save the most money on prescription drugs, take this drug list with you each time you visit your physician. Consider asking your physician to prescribe formulary medications on lower tiers, if appropriate. Decisions about the need for a prescription drug and dosage of a prescription drug must be made solely by you and your physician, in accordance with your patient/physician relationship.

The InScript Formulary is multi-tiered, placing prescription medication into copayment levels. Members should refer to their Benefits and Coverage documents to see what copayment structure applies to them.

Coverage Considerations

Most prescription drug benefit plans provide coverage for up to a 30-day supply of medication, with some exceptions. Your plan may also provide coverage for up to a 90-day supply of maintenance medications. Maintenance medications are those drugs you may take on an ongoing basis for conditions such as high blood pressure, diabetes or high cholesterol. Some plans may exclude coverage for certain agents or drug categories, like those used for erectile dysfunction, weight loss or infertility.

- Over-the-counter exclusions: The InScript Formulary may not provide coverage for prescription medications that have an over-the-counter version. You should refer to your benefit plan material for details about your particular benefits.
- Repackaged medications: Repackaged versions of medications already available on the market are not covered.

Formulary Tier and Status

There are 4 or 5 tiers in the formulary, depending on your plan benefit. Generally, the formulary uses the following designations to outline the products contained within it:

Designation	Formulary Status*
G	Generic
P	Preferred brand
NP	Non-preferred brand
SP	Specialty

*Some brands may be considered under generic status and some brands may be considered under generic status. Please review drug list below for details.

Prior Authorization

Some drugs require prior authorization (PA) to ensure appropriate use. This means that your doctor will need to submit a PA request for coverage. Coverage may be approved after certain criteria are met. If a PA is required for a drug listed in this document, it will be noted next to the drug in the Restrictions column as “PA”.

Step Therapy

A step therapy (ST) program means you may need to try an alternative drug before coverage may be available for the requested drug included in the ST program. ST programs help redirect members to safe, effective and less expensive alternatives. If a ST is required for a drug listed in this document, it will be noted next to the drug in the Restrictions column as “ST”.

Quantity Limits

Quantity limits (QL) help encourage drug use as intended by the Food and Drug Administration (FDA). The QL is the maximum quantity that can be dispensed over a given period of time. It can also refer to the maximum number of times the drug can be filled over a given period of time. These limits help encourage safe and proper use. If a QL is required for a drug listed in this document, it will be noted next to the drug in the Restrictions column as "QL".

Age Limits

Age limits (AL) can be put in place to ensure a drug is being safely used within the population that the drug was studied in by the FDA. This could be either a minimum or maximum age limitation. If an AL is required for a drug listed in this document, it will be noted next to the drug in the Restrictions column as "AL".

Specialty Drugs

Specialty drugs require special handling, patient monitoring, and unique education prior to use. These medications may be required to be dispensed by specific pharmacies that specialize in delivering these types of medications. If a product is considered specialty, it will be noted next to the drug in the Restrictions column as "SP".

Day Supply Limits

The day supply is the number of days' worth of medication your provider prescribes. Limits to the day supply may be for many reasons such as to prevent fraud, waste, and abuse to ensure the drug is being used an intended. If a day supply limit is required for a drug listed in this document, it will be noted next to the drug in the Restrictions column as "# Day Supply Limit".

Non-Covered Drugs

Certain drugs are non-covered on the InScript Formulary. If you fill a prescription for a non-covered drug, you will likely pay full retail price. Please talk to your physician about prescribing a preferred alternative. Non-covered medications are not listed in this formulary guide.

Formulary Changes

InScript reviews and updates the formulary as needed. New medicines may be added and medicines that are deemed unsafe by the Food and Drug Administration (FDA) or a medicine's manufacturer are immediately removed. We will communicate changes to members by mail, based on notification requirements established by each state. Members can view the most up-to-date formulary in the Member Portal at inscript.myrxplan.com.

Notice

The purpose of the InScript Formulary is to provide a guide to coverage. Decisions about the need for a prescription drug and dosage of a prescription drug must be made solely by you and your physician in accordance with the patient/physician relationship.

Disclaimer

This is not a complete list of your covered medications. Coverage is subject to change and may vary by NDC. Refer to Member Portal for more information at inscript.myrxplan.com and/or consult with your plan sponsor for coverage-related matters.
